Sprayer Setup and Calibration Meeting at Rutgers Snyder Farm

Win Cowgill

New Jersey Agricultural Experiment Station, Rutgers University

On Thursday June 9, 2011 a grower meeting was held at Rutgers Snyder Farm in Pittstown, NJ. The theme was saving money with proper sprayer setup and calibration. Lunch was provided by GrowMark FS, Bloomsbury, NJ and Helena Chemical Co., Woodstown, NJ. Twenty-seven growers were updated on brown marmorated stink bug control and its ramifications for NJ crop insurance claims.

Dr. John Grande, Director of the Rutgers Sndyer Farm, covered sprayer tune-up, nozzles, particle size, and how to get good coverage and control and avoid drift. Dr. Brad Majek, Specialist in Weed Science, Rutgers Cooperative Extension, covered the application techniques and Phil Brown Weed Sprayer setup for improved weed control and (crop) safety.

The group then moved outside for demonstrations

The patternator collects material from various locations from near the soil surface to what would represent the top of the tree.

The collected water (here died blue) visually demostrates the pattern of application from the lowest collector (right) to the highest collector (left).

of air induction nozzles and their ability to control drift with an airblast tower sprayer. The use of SurroundTM clay was demonstrated as a visual tool to check sprayer drift and coverage on both full dwarfing and standard size trees. Two Phil Brown weed sprayers were demonstrated in the field with the correct nozzling to get double overlap coverage.

Last but not least, our special guest, Jon Clements, Extension Educator, University of Massachusetts, conducted a special hands on session for air blast sprayer setup and calibration. He utilized specialized equipment (Patterntator, purchased with a grant from EPA Region 1) to evaluate the Synder Farm Rears Airblast Tower sprayer. The topics covered were: (1) measuring the three components of air blast sprayer output/calibration using a sprayer 'test bench'; (2) tractor speed; (3) sprayer pressure; and (4) sprayer nozzle output.

Jon Clements, UMass Extension Educator, conducted the demonstration at Rutgers Snyder Farm.

PLASTIC BAGS

Targit Sales is proud to introduce our line of Biodegradable plastic bags. Our bags use a proprietary additive that renders the plastic ultimately biodegradable.

We are offering the Biodegradable bag program with all of our "Custom Imprinted" plastic bags.

Our Biodegradable bags have the "EPI" (the additive company)

logo on the bag as proof of its biodegradable properties.

Advertise your business along with a "tag line" to express your company's efforts to keep your community and planet green.

Targit Sales can fully customize your bags to your specifications. We can make any size, strength, and style of bag to fit your needs. We can assist you with your design, setup, and artwork.

COMMON SIZES OF BAGS:

13 x 10 x 24 (Great for pies, cakes and corn) 12 x 8 x 24 (Great for your store front) 8 x 5 x 21 (Perfect size for tailgate markets)

BIODEGRADABLE PLASTIC BAG BENEFITS!

- * Superior Strength!
- * Less expensive to make and ship versus paper bags!
- * Superior imprinting capability and quality...(looks better)!
- * Easier and more affordable to store (inventory)!
- * Flexibility! (customize the size, thickness, color and style to your specifications)
- * Reusability!
- * Biodegradable..breaks down quickly!

MOST COMMON QUESTIONS asked about biodegradable bags.

Will the bags begin to break down while being stored? No, the bags will retain its strength and integrity while properly stored. The breakdown only begins after it is directly exposed to certain environmental conditions such as: soil/landfill, heat/moisture, and sunlight.

Is this process more expensive? Not really, the cost increase is only a few percentage points higher. You will more than make this up with the goodwill you will be conveying to your community and customers.

Does the bag lose its strength or feel...does it look different? No, it is almost impossible to tell the difference between the Biodegradable bags and the traditional plastic bags. This is why we recommend putting a tag line on your printed biodegradable bags.

Can these bags be recycled and/or reused? Yes, these bags can be recycled and reused.
