

Appletesters.net – A New Website to Assist Apple Growers and Apple Testers in Variety Selection

Win Cowgill

New Jersey Agricultural Experiment Station

Jon Clements

University of Massachusetts Extension

Appletesters.net is a new website designed to assist apple growers in variety and cultivar selection for new orchard plantings. It is also designed to provide a location for anyone conducting cooperative apple evaluation and testing to report and archive their findings using a unified protocol for apple variety fruit and trees.

Variety and cultivar selection is the largest economic decision a grower can make when establishing a new high-density orchard block of a thousand trees or more per acre using tall spindle systems.

Appletesters.net allows growers or potential growers to log on and view records of a variety from different locations over multiple years to assist making their planting decisions.

The online records allow cooperators and growers to see what variety characteristics are performing best in their area. The database will include pictures and casual observations in addition to fruit quality measurements and important horticultural characteristics including tree habit, bloom time, disease tolerance, mortality, precociousness, fruit appearance, taste, storability, and more.

Directions for Use

Point your web browser to: <http://appletesters.net>. Click on the apple testers database Guest Login. This brings you to our login page, select the guest account button and click login. This brings you to a data base record; you are now in the system. The first thing you should do is familiarize yourself with the database layout. In the tool bar at the top, all the way

to the right is a help button. Click the help button to open a new window that contains the directions as to how the database works. Read through and see what it's all about. This window will stay open for reference for you at any time.

Example of Use

Lets look at one search as an example of one way to use the database. In the tool bar select the button Find. This will bring up a blank data base record, you can search on any criteria but lets select the cultivar box by typing a cultivar/variety, lets say Zestar. Then go back up to the tool bar and click the Perform Find button. This brings up 7 records for Zestar. You know this by again looking at the toolbar on top in the left hand corner at Found Records. With Zestar (As of 12/15/12) you will see 7 records that you can cycle trough using the arrows to the left of the Found Records icon.

Appletesters.net will become an important repository of cultivar/strain information on tree growth and fruit quality over many seasons. Such information should be very useful to apple growers looking for more and/or unbiased variety/strain information to make future planting decisions.

Funding

Funding for this project was provided by a North East SARE partnership grant.

REARS POWERBLAST
A powerful machine with PTO drive and the patented Constant Velocity Hitch (CVH). 400 or 500 gallon tank.

REARS PAK TANKS
3 Pt. hitch, pto drive diaphragm pumps, choice of booms or guns.

REARS PUL BLAST
100-500 gallon tanks. Medium sized, variable pitch fans. Diaphragm or centrifugal pumps.

**REARS FLAIL MOWER
OMF-750 SERIES**
Super-duty low profile, uses a double row spherical roller bearing with oversize rollers and eccentric locking collar.
